Emissions data. Source of information: Eurocert database, compiled from historic and current vehicle data by way of reference to UK DVLA and DVSA data records and information, and EU vehicle registration documentation, as well as EU/European publicly-published emissions records, and published emissions statements from vehicle manufacturers. All Eurocert-published emissions information is secondary-data.

Agencies referencing Eurocert documentation, such as this document, should consider undertaking their own or corroborative checks. Eurocert Limited accepts no responsibility for mistakes or unrepresentative data in our published emissions information caused by secondary-data referencing. Vehicle manufacturers and other sources change specific vehicles' emissions readings from time to time and emissions readings for certain vehicles may vary from one governmental agency to the next, due to their own secondary-data and research limitations.

Homologation, Independent Conformity and Type Approval Research by Eurocert Limited. Registered Office: Unit 8, 179 Whiteladies Road, Bristol, BS8 2AG. **The purpose of this document:** This document (certificate) certifies a research event has taken place. The vehicle's identity information supplied by the notifier/vehicle owner and some (other) vehicular data is shown. This certificate does not confirm the identity nor existence of this specific vehicle with the VIN shown. It does not attest to any regulations having been met, nor does it verify any statutory procedures have been undertaken or met. Data shown is the product of independent research or recorded from a statement from the notifier/vehicle owner. Data may have been researched by reference to existing records, such as manufacturer publications, government and public databases and motoring organisations databases. If a vehicle manufacturer cannot or will not produce a Certificate of Conformity (ECWVTACOC) retrospectively (because of the age of a vehicle or other issues) road agencies and authorities may, at their discretion, accept this Independent Certificate of Conformity (ICOC) as presentation of vehicle information. Registering authorities should undertake their own research and verification to ensure this vehicle exists by a visual inspection. With the issuing of this document we decline all responsibility about the current state of the vehicle, as it has not been viewed nor inspected.
