

MOBILE CONNECTING UNITS

MOBILE CONNECTING CABINS

We are pleased to offer a large quantity of mobile connecting units - approximately 100 sets (subject to remaining unsold). The units are extremely high quality and can be used in many different applications. Built in 2020/2021 specifically for medical purposes, each set comprises 3 individual cabins that interlink to provide nearly 500 sqft of internal accommodation.

Built on tandem axel fast tow trailers the units are incredibly easy to manoeuvre and deploy. The interlinking doors gives a good separation between office space and treatment rooms where necessary.

DEPLOYED & READY IN MINUTES

The cabins can be easily transported and deployed. Each cabin has lifting eyes for transport by crane. The cabins are towable and VCA & HSE compliant, complete with emergency brakes and vehicle rear lighting.

Once the cabins have been placed in their desired location, they can be auto-levelled using the in-built hydraulic jacking system.

POWER & EFFICIENCY

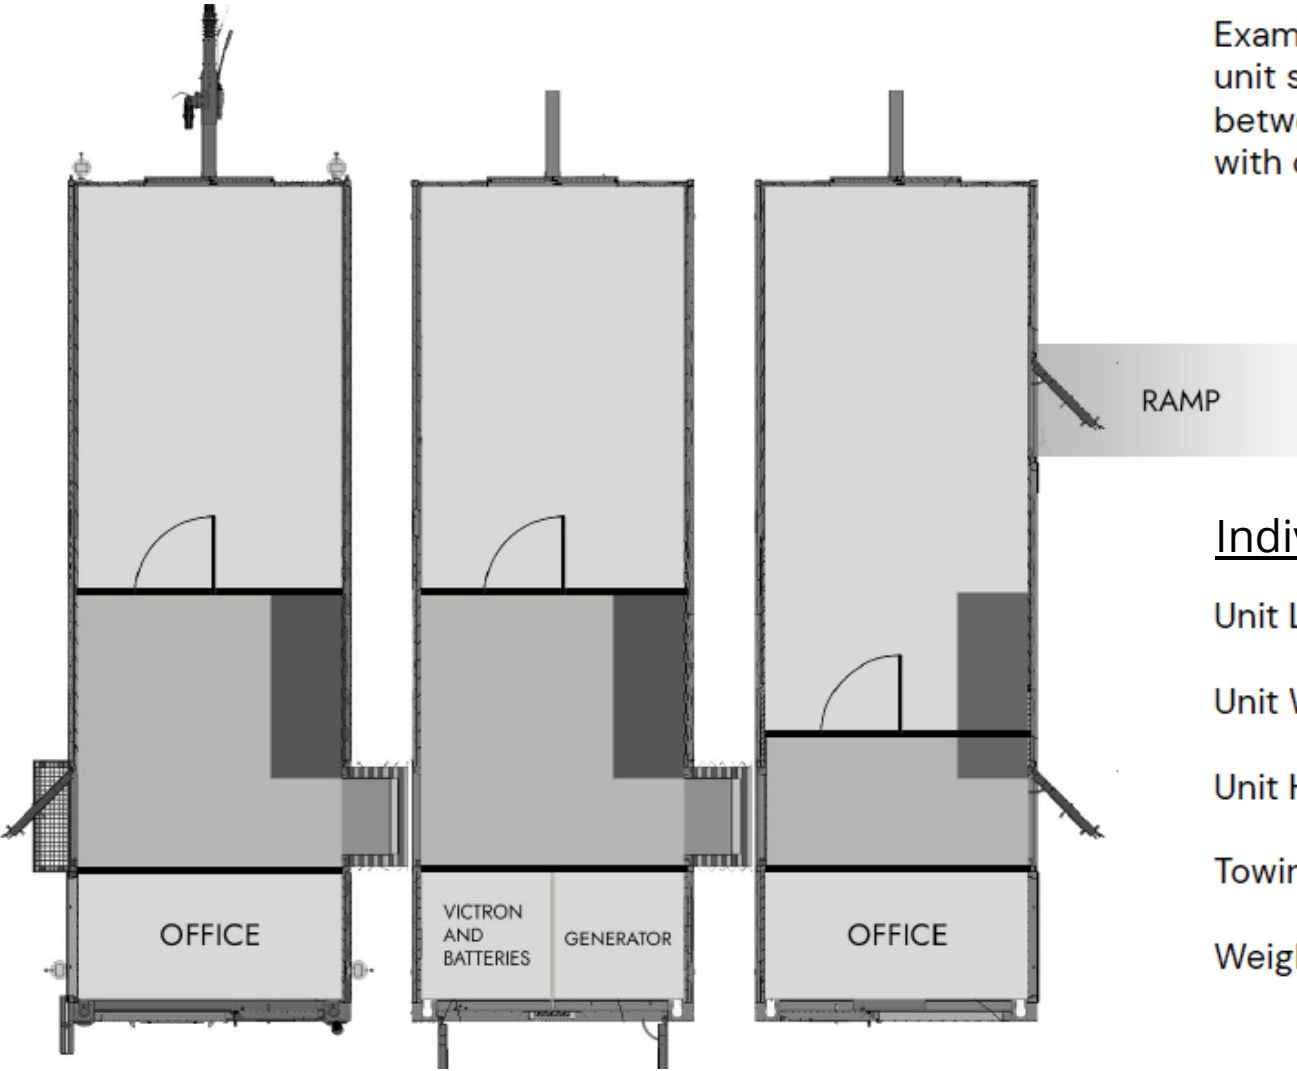

The cabins can be powered by an external 9-pin 240v power input. With a highly efficient electrical system designed for the lowest levels of energy consumption.

Each set of three cabins is complete with a Redbox Infinity© generator with 2000hr service intervals.

If the cabin's main power source was to fail, this is recognised by the Victron© battery charger and the generator will automatically start.

Technical Specifications

Example of an interlinked 3 unit setup, with 55cm spacing between each unit. Complete with disabled access ramp.

Individual Unit Spec

Unit Length: 6988mm

Unit Width: 2300mm

Unit Height: 2398mm

Towing Length: 8364mm

Weight: 3.5Tonne
